# ${\sf DowntownSeattleParking.com}$

Mobile Screen Images | Red Line | 6.26.2013

A Home screen displays introductory text and series of user-focused options for sorting parking data.

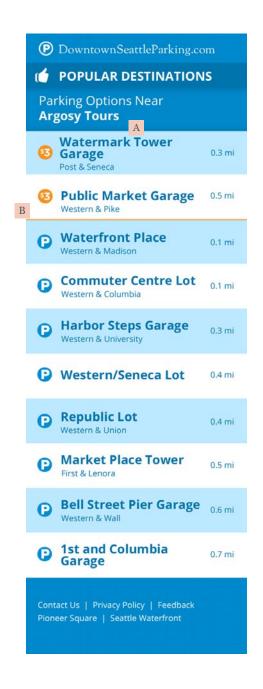

D Global footer

- B Sorting options are focused on consumer goals and important considerations such as price and availability.
- C Additional Resources and Current Promotions modules would display below the sorting options.

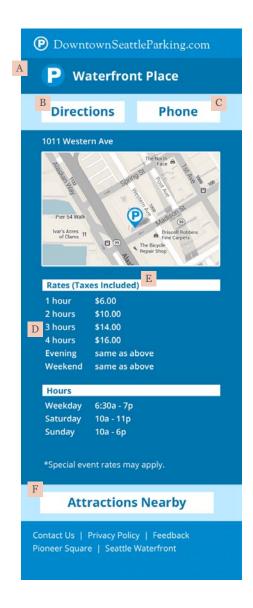

- A Default sorting will be alphabetical, with the option to sort the list based on proximity.
- B List of popular destinations should be determined by the working group. Other suggestions, not depicted here: Underground Tour, Klondike Gold Rush Museum, SAM Sculpture Park, King St. Station, Smith Tower.
- C Tapping "Argosy Tours" delivers user to a limited list of lots near the chosen destination.
- D Sub-lists have been proposed for categories with multiple, smaller-scale attractions.

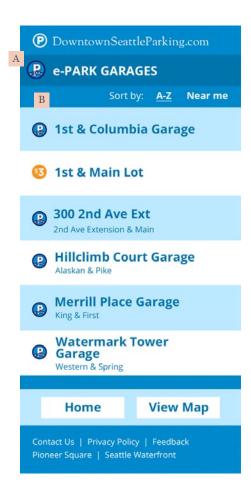

NEED: APPROVED LIST OF POPULAR DESTINATIONS

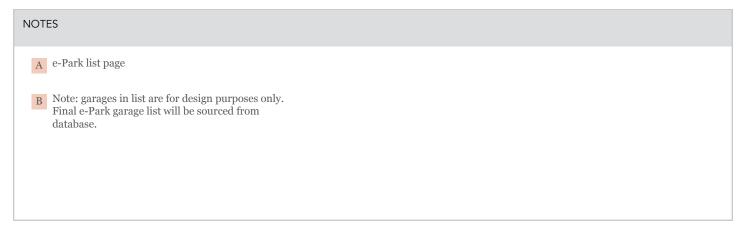

- A Selecting "Argosy Tours" from the "Popular Destinations" menu delivers a list of TEN nearby parking options.
- B List relevant \$3/hour garages first. Visually separate \$3/lots with orange horizontal rule.

# A This is the standard page template for each lot. B Tapping "Directions" opens up the smartphone's native map application and populates the destination field with the address of the Garage/Lot. C Tapping "Phone" opens up the smartphone's phone app with the Garage/Lot number dialed in. D Garage/Lot data, same as desktop site. E If taxes not included say "(22% Tax Not Included)" F Optional feature: each Garage/Lot page could be associated with nearby attractions listed below price/hours data. NEED: PHONE NUMBERS ADDED TO GARAGE FOR EACH GARAGE

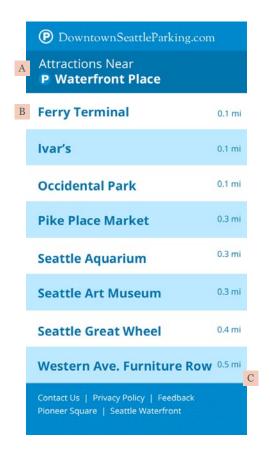

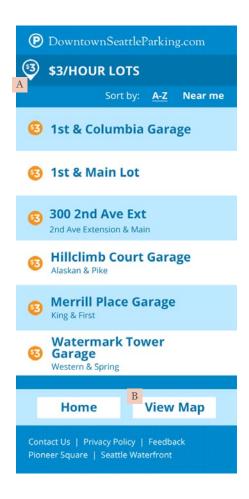

- A On pages for garages that support e-Park data, we will display spot availability and capacity (if available).
- B Bar graph can display availability by percent, if capacity data is available.
- C If garage is both \$3/hour and e-Park, \$3/hour status trumps e-Park logo.

NEED: CAPACITY INFORMATION

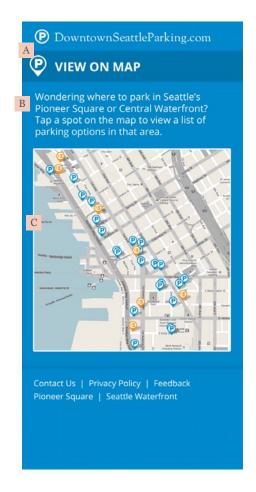

- A Selecting "Attractions Nearby" from the individual lot pages delivers to this page.
- B Attractions will be listed by proximity to Garage.
- C Suggested limit for "near" is 0.5 mi.

All \$3/hour lots display on this list.

B Leads to "View Map" page, displaying all garages on map.

NEED: PARKING GROUP TO SCRUB GOOGLE DOC FOR AP STYLE, GARAGE NAMES, CROSS STREETS AND PHONE NUMBERS

- A Interactive map to allow user to view clusters of parking options and select areas to view a list of relevant garages.
- Added text consistent with home screen in order to be clear about our area of coverage.
- C User tap on specific area will result in list of proximate garages to that area.
